About Your Water Heater

CAUTION:

**When flushing your water heater there is danger of being scalded by hot water.
Be careful and keep children and pets away during the procedure.**

Water heater manufacturers recommend flushing your water heater periodically. How often your water heater needs to be flushed depends upon the quality of the water in your area.

Over time, your water heater can accumulate sediment consisting of sand, gravel and various mineral deposits. This buildup can reduce the amount of hot water your water heater holds, create a variety of interesting noises and reduce the efficiency of your water heater. The buildup of sediment at the bottom of the water heater can harden and sometimes clog the drain valve.

For more information on flushing your water heater contact Richard Navarro in the Public Works Department at 925.516.8050.
